PKB Animal Health announces *ZYMOX*® formulations effective against *Methicillin-Resistant Staphylococcus aureus* -- adding to growing list of antimicrobial effectiveness

Westmont, IL -- December 3, 2009 -- PKB Animal Health has confirmed through two independent laboratory tests, the patented LP3 Lactoperoxidase enzyme system in *ZYMOX*® Otic and *ZYMOX*® Topical Spray for dermatologic application has demonstrated antibacterial activity against *Methicillin-Resistant Staphylococcus aureus*. Publication of this data is featured in Vol 7, #4 of the *International Journal of Applied Veterinary Research* www.jarvm.com.

This news has timely benefits as the veterinary community has seen an increased incidence of MRSA cases and news items confirming the prevalence of pets as potential MRSA carriers. Gentle on skin, yet effective on microbes, Zymox® is formulated without antibiotics, harsh detergents or harmful chemicals. Zymox® adds another level of confidence in the ability to treat stubborn infections of the ears and skin including antibiotic resistant microorganisms and has been shown to eradicate MRSA in as little as 30 seconds upon contact. The protocol for use is non-invasive, once-a-day and requires no pre-cleaning – an added benefit where compliance is a concern.

Additional information regarding Zymox® effectiveness against a broad range of microbial organisms can be found on www.jarvm.com website, Vol 1, No 3 Summer 2003, including but not limited to pseudomonas, staphylococcus, malassezia, candida albicans and pyoderma.

PKB Animal Health is dedicated to developing and providing a broad range of patented, antimicrobial enzyme-based topical products which are safe, non-toxic and proven to be effective antibiotic alternatives.
