

ZYMOX[®] for Relief from Allergy Complications

LP3 ENZYME SYSTEM

*Proven
Natural
Antibiotic
Alternative*

Humans sneeze, pets get itchy or infected. The most common reaction to allergens in humans occurs primarily in the respiratory tract. Many pets present allergy symptoms with external dermatology issues. Pets weakened by allergies become susceptible to ear infections, hot spots, yeast overgrowth and general bacterial/fungal infections. The **ZYMOX[®]** line features the patented **LP3 Enzyme System** which makes it a broad spectrum, natural anti-inflammatory antibiotic alternative. Ideal for managing the complications of allergies.
